```
# This is just a text file.  
  
# base R graphics  
x <- 1:50  
plot(x) # value vs. index
```

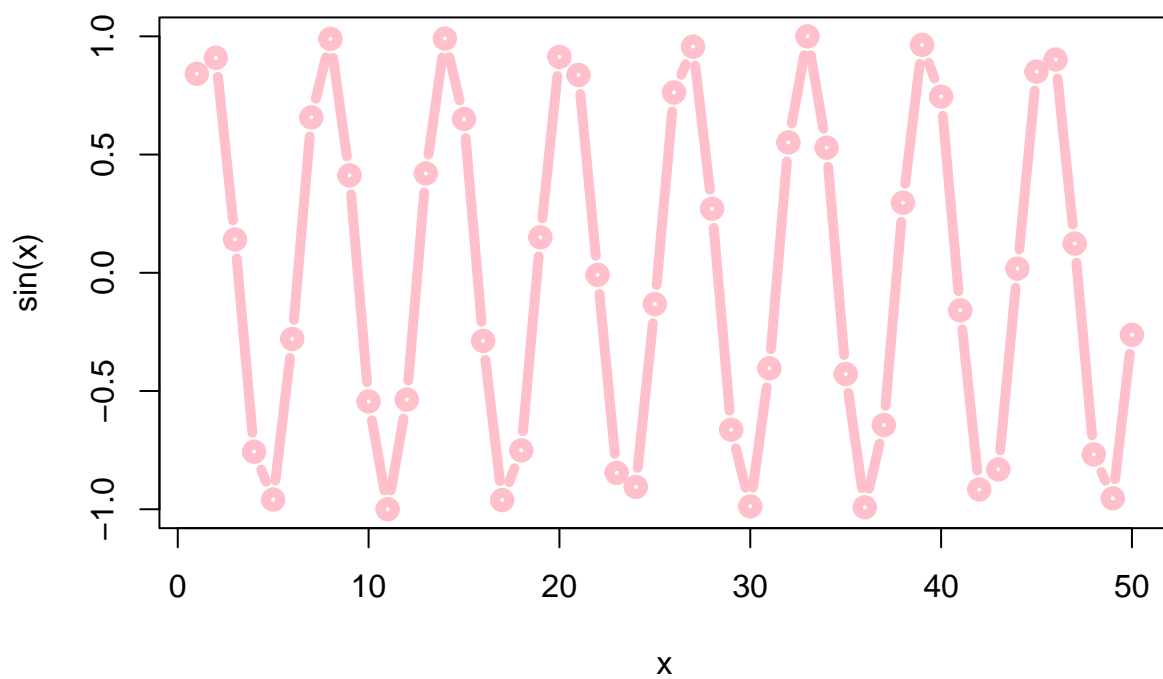

```
plot(x, sin(x)) # now x and y, but this is ugly - argue
```

```
plot(x, sin(x), type = "l")
```

```
plot(x, sin(x), type = "b", col = "pink", lwd = 5)
```

```
# use packages instead of base R  
# for plots - ggplot
```
